

Chike has been coughing for a week now, and I thought those antibiotics would help, but he just keeps getting worse.

Let's get him checked out. Antibiotics don't work for every illness, you know.

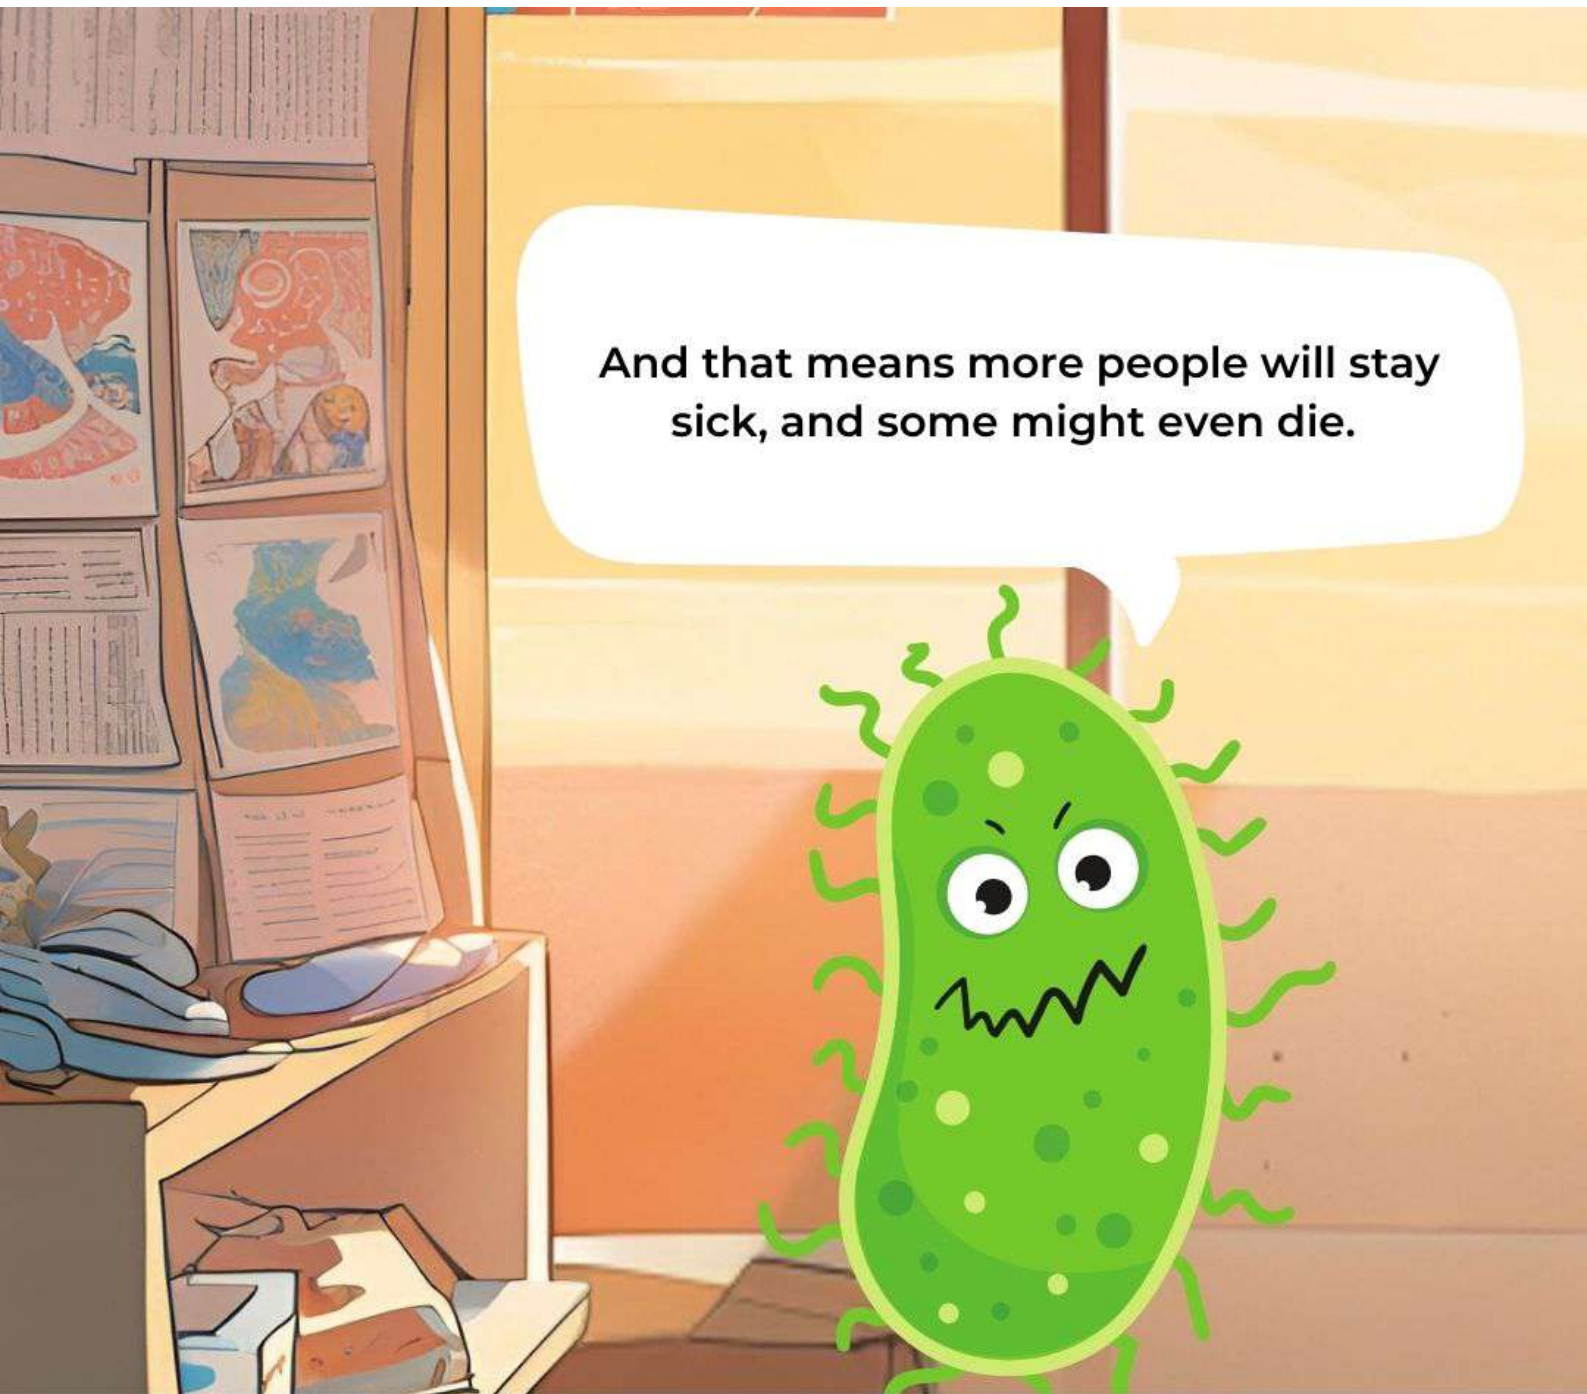

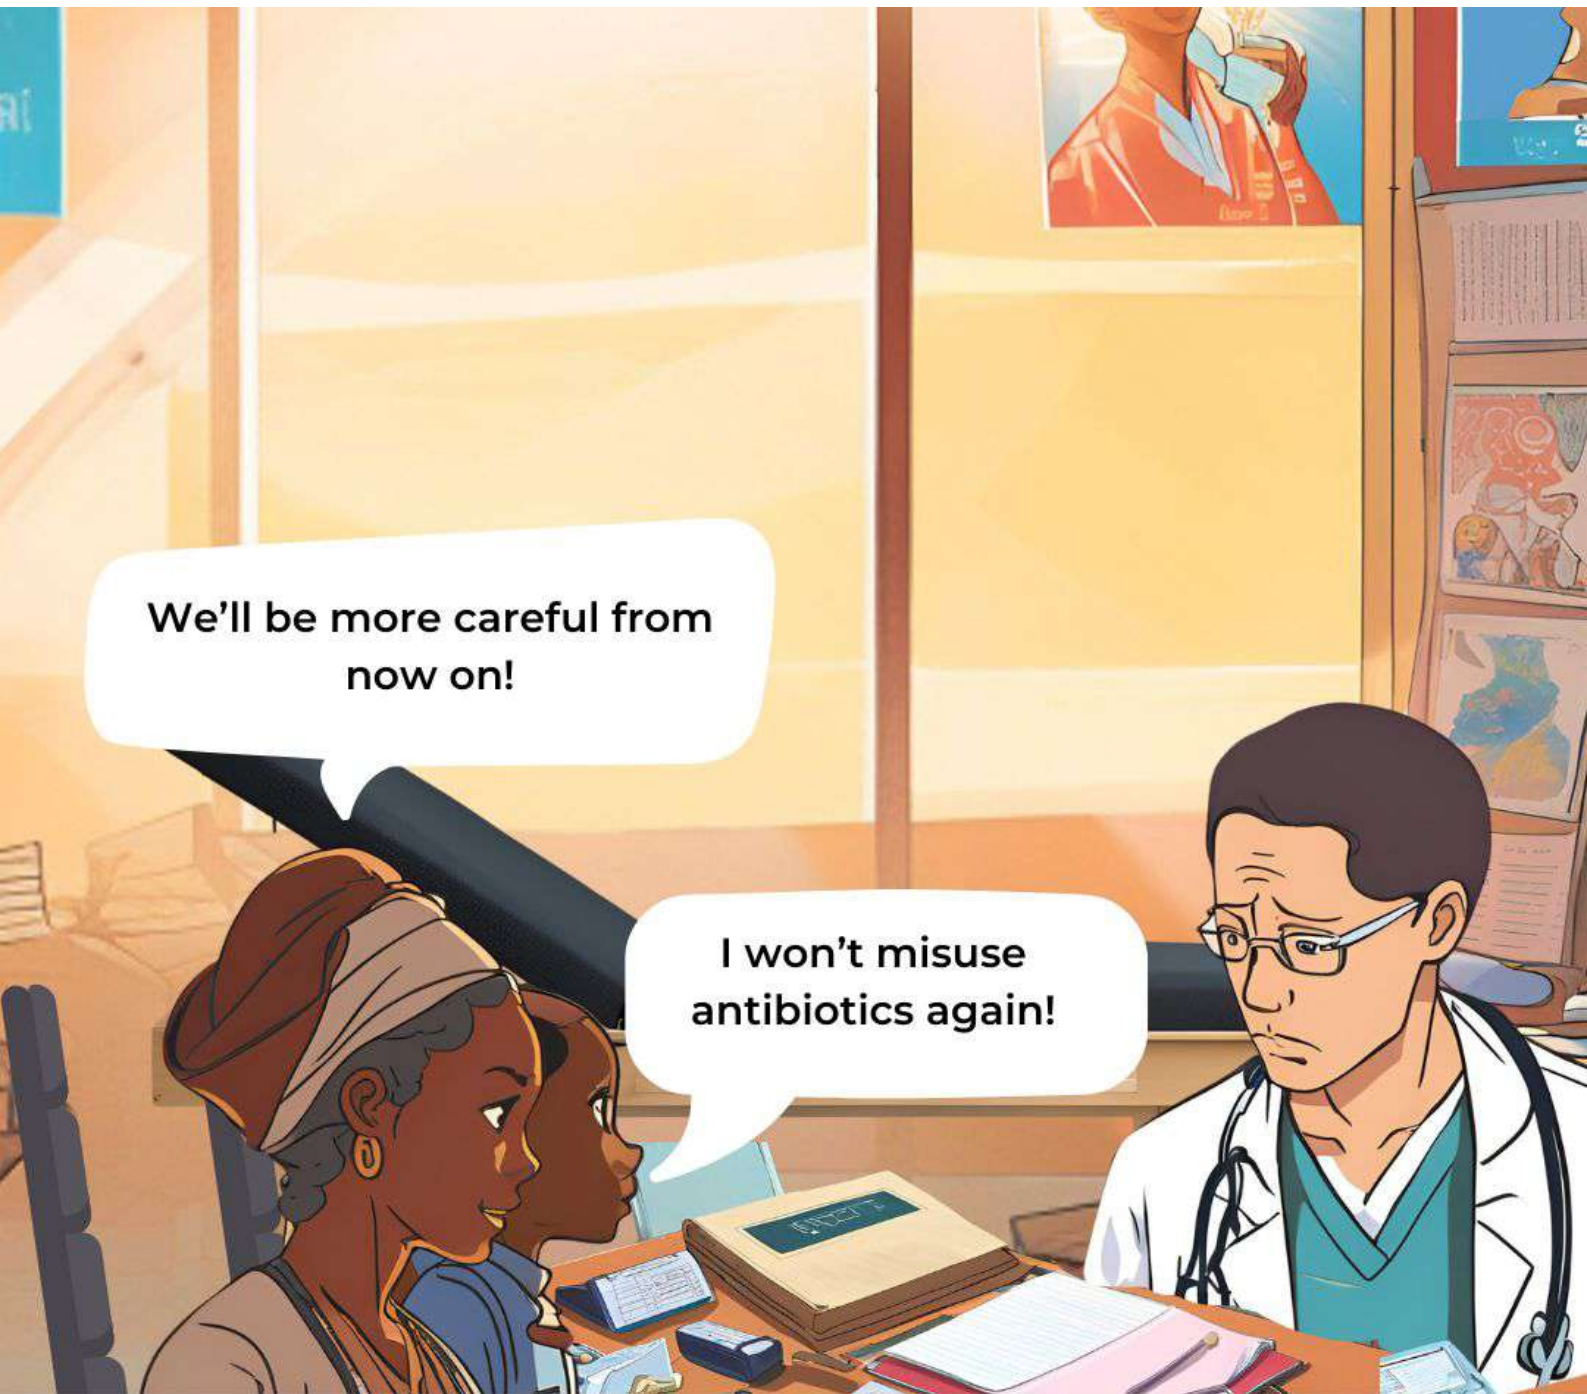

Hmm, Chike, it sounds like a viral infection. Unfortunately, antibiotics won't help with colds or most coughs. They only work on bacterial infections, and overusing them can make bacteria stronger.

Every time you misuse antibiotics, I get stronger! Soon, no antibiotic will work on me!

An illustration of a doctor's office. A male doctor with glasses and a stethoscope is sitting at a desk, looking at two female patients. The patients are looking at each other. On the wall, there are several posters: one with a hand being washed, one with a large red bug, and one with a person sitting at a desk. A large speech bubble is coming from the doctor.

This is why we have to be careful. Only use antibiotics when prescribed and always finish the dose, or Superbug wins. And if we don't change how we use antibiotics, infections will get harder to treat.

We'll be more careful from now on!

I won't misuse antibiotics again!

3 STEP TO **Avoid AMR**
