

PROTECT YOUR PETS, PROTECT YOUR FAMILY

ACTION STEP

AMR isn't just a human problem
– let's keep our pets healthy
too!

AVOID ANTIBIOTIC OVERUSE IN ANIMALS!

Antibiotics
Antivirals
Antifungals
Antiparasitics

What is AMR?

Antimicrobial Resistance (AMR) happens when infections stop responding to medicines, making simple illnesses harder—and sometimes impossible—to treat. This means longer illness, higher medical costs, and more lives at risk. Together, we can protect antibiotics and secure our future health.

How You Can Prevent AMR

Only give
pets
antibiotics
prescribed
by a vet.

Do not self-
medicate
animals, as
this can lead
to AMR.

Prioritize
vaccination
and hygiene
practices for
pets

Owner Responsibilities

- Bring pets for regular check-ups.
- Practice safe pet-handling and waste disposal.
